Mine and Cave Safety and Health Program

The Mine and Cave Safety and Health Program trains miners in the practice of implementing safe and healthy working habits at the workplace. Training services include safety and health, first aid, cardiopulmonary resuscitation (CPR) and mine rescue. Training is available at no charge.

The program also includes consultation services. Mine and Cave Safety inspectors assist miners with mine openings, closings, safety programs, dust and noise assistance and compliance with Mine Safety and Health Administration (MSHA) standards. The Mine Inspection Section regularly inspects mines in order to help create safe and healthy working conditions for mine employees.

Recipients of these services have experienced the program's worth. Many employers have reduced accidents and injuries in their workplaces. Fewer accidents and injuries create workplace environments which can lower workers' compensation costs, increase employee attendance and productivity and improve employee morale.

The Mine and Cave Safety and Health Program offers services for mines.

Through inspection:

- auditing safety and health programs,
 - assisting in preparing ventilation programs,
 - teaching mine rescue training, and
 - auditing processes for safety and health problems.
-

The Mine and Cave Safety and Health Program offers services for **caves**.

Through inspection:

- safety and health.

Through consultation:

- identifying and proposing hazard abatement, and
 - auditing safety and health programs.
-

The Mine and Cave Safety and Health Program offers **training**. The Mine Act of 1977 requires miners working in surface, underground mines, coal, metal and nonmetal mines to complete the following training under Code Federal Regulations (CFR) 30, part 46, 48, 49, 56/57 and 75.

- Annual Refresher,
 - New Miner,
 - First Aid (titled under CFR 30, part 56, 57, 77),
 - CPR,
 - Mine Rescue, and
 - other site specific custom tailored training.
-

The Missouri Mine Safety and Health Training Program has a Lending Library for the mining industry. We have safety and health videos, course descriptions, and other mining related informational brochures to aid you, the operator, in miner training. Please feel free to write or call us about these products.
